

Summer Work for Computer Science / AP Computer Science

Check out the instructional videos at:

The New Boston

<https://thenewboston.com/videos.php?cat=31>

These instructional videos walk you through some basic coding techniques in Java. The videos are developed using the Java Development Program called "Eclipse". I will not be using "Eclipse" in class, but will be using the Java Development Program called "bluej". I like some of the features of "bluej" better than "Eclipse" but if you prefer to use "Eclipse" that will be fine. At the end of the day Java is Java...

You can download "bluej" at:

<https://bluej.org/>

You will also find some other resources at that site with regards to Java Development.

AP Computer Science Students should also check out the AP Java Subset.

This is a list of the required coding material needed for the AP Exam. It would be good to familiarize yourself with these topics as we will be enhancing our understanding of these topics during the course.

You can find the Java Subset at:

<https://secure-media.collegeboard.org/digitalServices/pdf/ap/ap-computer-science-a-java-subset.pdf>
